DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 and 18-20 rejected under 35 U.S.C. 102(b) as being anticipated by Osborne (6,290,594). See col. 3, lines 26-57, **26** for the gas sensor, **16** for the control unit and **22** for the means for the reduction of gas concentration. Regarding claim 18, see col. 3, lines 43-57. Regarding claim 20, see **30**.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim(s) 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osborne in view of Strobi et al. (5,132,663). Osborne discloses all of the limitations of the claim(s) except for the control unit triggering peripheral automotive equipment in response to harmful concentration levels. Strobi et al. discloses the presence of a control unit triggering peripheral automotive equipment in response to harmful concentration levels. See col. 5, lines 41-64. Hence, one skilled in the art would find it obvious to modify the system of Osborne to include

Art Unit: 3749

the control unit triggering peripheral automotive equipment in response to harmful concentration levels of Strobi et al. for the purpose of increased safety.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The provided references are representative of the state of the art that is applicable to the applicant's invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derek S. Boles at (703) 308-1804 or fax number (703) 872-9306. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0861.
